SUMMARY

Data Science student and IBM SAP AI Enablement Consultant intern specializing in AI agent orchestration and LLM token/inference-cost optimization, shipping production-grade, sophisticated AI agents and dashboards that cut model spend while preserving output quality.

EDUCATION

B.S. Data Science, Business Innovation Technology Minor, University of Maryland, College Park (Expected May 2027)

Selected Coursework: Data Science Pathway, interdisciplinary applications for creating data-centric products and programs addressing scientific, socio-political, and business problems.

A.A. General Studies, Howard Community College (Completed June 2025)

EXPERIENCE

SAP AI Enablement Consultant Intern, IBM Consulting

May 2026 to Jul 2026

- Engineered an automated system that routes each task in advanced AI agent workflows to the most cost-effective capable model, rather than defaulting to a single premium model, cutting measured per-task AI spend versus a premium-model baseline while preserving output quality.
- Delivered real-time cost visibility by shipping a dashboard (validated by 68/68 passing tests) that prices every AI call against the baseline, so teams see exactly what each workflow costs and saves.
- Spearheaded internal automation tools that converted multi-hour manual document and pricing tasks into self-service workflows (one cut a pricing process by roughly 90%, stakeholder-reported), freeing consultants for higher-value client work.

NSSIP RITIS Data Analytics Engineer, CATT Lab (Human Factors of Focus)

Summer 2025

- Powered human-factors research on emergency traffic-map interfaces by extracting and transforming real-time RITIS traffic feeds with Python and Pandas into clean, research-ready datasets.
- Enhanced operator focus in high-pressure scenarios by prototyping data-filtering mechanisms that cut on-screen density to the incidents that mattered most.
- Engineered dynamic visualization logic that ranks and surfaces high-priority traffic incidents by severity and proximity in real time, improving incident triage.

PROJECTS

Game Development Mentorship Program

Summer 2023

- Engineered game mechanics in C++ and Unreal Engine under a Riot Games senior engineer by debugging blueprint code, analyzing AI behavior trees, and integrating physics-engine solutions.

LEADERSHIP

Math Coach, Math Success Program, UMD

Jan 2025 to Present

- Mentored students across 100 to 300 level MATH/STAT courses (Calculus III, Differential Equations, Statistics 400), improving outcomes through group-tutoring sessions and personalized study plans built from diagnostic assessments.
- Cultivated student confidence and retention on high-difficulty topics by breaking complex proofs and methods into step-by-step walkthroughs tailored to each student's gaps.
- Authored reusable practice materials and worked examples adopted across multiple course sections and semesters.

School-Age Child Care Teacher, ABC Care Inc.

Jul 2023 to Present (Seasonal)

- Ran daily operations for an after-school non-profit serving 20 to 90 children by leading a 2 to 3 person staff, managing budgets and enrollment, and delivering weekly lesson plans.

Teaching Assistant, Howard Community College (Honors Calculus & Mechanics)

Spring 2024

- Raised student comprehension by simplifying complex theorems, redesigning discovery-lab experiments for student-driven demonstrations, and analyzing performance and survey data to improve the course.

SKILLS

Languages / Frameworks: Python, Java, JavaScript, C/C++, SQL, HTML/CSS • React, Pandas, NumPy

AI/LLM / Tools: LLM orchestration, prompt engineering, agent/plugin dev, token-cost optimization • Git/GitHub, VS Code, Unreal Engine, Unity, Photoshop

HONORS & AWARDS

Phi Theta Kappa • Math & Science Honors • University Honors • MD AP Honors Award (AP CS)
